

London's first carbon neutral courier service is e-lectric!

eCourier.co.uk, Europe's fastest growing same day logistics company, is e-lectric! In 2006 we became London's first carbon neutral same day courier company, and now we're trialling zero emission electric vans and scooters as part of our fleet.

eCourier.co.uk is testing the 'Gem eLXD, which has been used by NASA; the funky MEGA multi-truck; and the worlds first purpose built electric scooter – the 'e-max'. Over the coming months, you'll find it hard to miss these fun-sized vehicles buzzing around central London, blazoned with our distinctive purple and pink branding.

These clean, green, zero emission machines leave no carbon footprint behind them. We aim to achieve ISO 14001, and are on track to reduce our carbon emissions, by consignment, by a whopping 40% by 2009. We're adding more and more LPG-powered vans to our fleet, have a growing army of bicycle couriers, and will continue to test electric options until we have found vehicles that both reduce our carbon footprint, and are commercially practicable in terms of ensuring continuity of service.
